Sudoku X also called Diagonal Sudoku. The puzzle is a 6x6 grid made up of 3x2 subgrids (called "regions"). Some cells already contain numbers, known as "givens". The goal is to fill in the empty cells, one number in each, so that each column, row, region and diagonal contains the numbers 1 through 6 exactly once. Each number in the solution therefore occurs only once in each of three "directions", hence the "single numbers" implied by the puzzle's name.

This “fascinating” (Malcolm Gladwell, New York Times bestselling author of Outliers)

examination of literary inventions through the ages, from ancient Mesopotamia to Elena Ferrante, shows how writers have created technical breakthroughs—rivaling scientific inventions—and engineering enhancements to the human heart and mind. Literature is a technology like any other. And the writers we revere—from Homer, Shakespeare, Austen, and others—each made a unique technical breakthrough that can be viewed as both a narrative and neuroscientific advancement. Literature’s great invention was to address problems we could not solve: not how to start a fire or build a boat, but how to live and love; how to maintain courage in the face of death; how to account for the fact that we exist at all. *Wonderworks* reviews the blueprints for twenty-five of the most significant developments in the history of literature. These inventions can be scientifically shown to alleviate grief, trauma, loneliness, anxiety, numbness, depression, pessimism, and ennui, while sparking creativity, courage, love, empathy, hope, joy, and positive change. They can be found throughout literature—from ancient Chinese lyrics to Shakespeare’s plays, poetry to nursery rhymes and fairy tales, and crime novels to slave narratives. A “refreshing and remarkable” (Jay Parini, author of *Borges and Me: An Encounter*) exploration of the new literary field of story science, *Wonderworks* teaches you everything you wish you learned in your English class, and “contains many instances of critical insight....What’s most interesting about this compendium is its understanding of imaginative representation as a technology” (The New York Times).

An individual's values are established in childhood and serve as filters when determining right from wrong throughout the person's life. In today's society, this process of establishing values within our children is given little concern. The responsibilities of parenting have become a reactionary process whereby each parent is doing whatever he or she must do in order to get through life. By default, we are teaching our children that values such as integrity, respect for life, courage of conviction, purposefulness and generosity are secondary to making a

living. In truth, there is nothing stopping us from being true to good and meaningful values except ourselves. The Value of Values teaches us the required actions and the reasons this important transition is needed. This book identifies what it will take from each of us to sustain the drive to pass our values onto our children. Ed Gagnon is a vice president at a manufacturing company in North Attleboro, Massachusetts. The Value of Values is his fifth published book, and he has more in the works.

Follow her through unmet desires, loneliness and fear. Join the struggle with her as she fights to save her marriage, her family and, more importantly, herself. Rejoice with her as her renewed faith gives her the power she needs to change their lives forever.
