Get the Key to the Boardroom with Powerful Executive Presence! "This book can be a key aid in helping you make it to the next level! Great coaching for anyone who is even thinking of becoming an executive!" Marshall Goldsmith, New York Times bestselling author of What Got You Here Won't Get You There "On the corporate battlefield a true leader's success is based upon his or her ability to communicate effectively, persuade others to follow a goal, and execute it. This leads to success for all. When the stakes are high, you're well advised to read this book first." Scott A. Gaines, vice president, Hertz Corporation "If you are seriously looking to be perceived in the light you choose, Executive Presence is the book that not only answers the question, but shows you how to apply the answers." Kevin Hogan, author of The Psychology of Persuasion "Harrison Monarth is a first-rate thinker who writes as clearly as he thinks. No matter where you are on the career ladder, Executive Presence will put you a step ahead of

your competition.” T. Scott Gross, author of *Positively Outrageous Service* “Most people know that to move up in your career, you need to have self-awareness and the ability to manage the perceptions of those whose opinions count. . . . Executive Presence is your comprehensive guide to help you become more proficient at self-marketing and the art of ethical persuasion to achieve your personal and professional goals.” Larina Kase, PsyD, MBA, author of *The Confident Leader* and coauthor of the New York Times bestseller *The Confident Speaker* About the Book An expert in coaching high-level players in the art of perception management, Harrison Monarth reveals the critical difference between CEOs and those of us who wish to be CEOs. It’s not a matter of intelligence, connections, or luck. It can be summed up in two words: executive presence. While most of us toil in obscurity and expect great things to follow, those on the path to corporate leadership spend their time perfecting the types of leadership communication skills that generate respect and get others to share their vision. They use these skills to establish how they are perceived by others and to manage their reputation throughout the organization. In other words, these soon-to-be top players have developed the presence of an executive through careful image management—and they make sure they have the goods to back it up. In *Executive Presence*, Monarth shows how you can seize control of your own career using the same skills. Inside, he explains how to: Accurately “read” people and predict their behavior Influence the perceptions of others Persuade those of opposing views to your side Create and maintain a personal “brand” Manage and control your online reputation Perform damage control when things go wrong Monarth’s conclusions aren’t based solely on his keen insight and extensive experience; they’re the result of the latest scientific research in interpersonal communication and human behavior. Talent and skills are important, but they alone won’t take you to the top of your organization. People reach highly influential positions because they deeply understand the power of perception and know how to leverage it in their favor. The good news is, anyone with the will to succeed can do it. *Executive Presence* provides all the techniques you need to take your career to the highest level of any organization.

Cosmology: The Science of the Universe is an introduction to past and present cosmological theory. For much of the world's history, cosmological thought was formulated in religious or philosophical language and was thus theological or metaphysical in nature. However, cosmological speculation and theory has now become a science in which the empirical discoveries of the astronomer,

theoretical physicist, and biologist are woven into intricate models that attempt to account for the universe as a whole. Professor Harrison draws on the discoveries and speculations of these scientists to provide a comprehensive survey of man's current understanding of the universe and its history. Tracing the rise of the scientific method, the major aim of this book is to provide an elementary understanding of the physical universe of modern times. Thoroughly revised and updated, this second edition extends the much acclaimed first edition taking into account the many developments that have occurred.

Students of engineering mechanics require a treatment embracing principles, practice and problem solving. Each are covered in this text in a way which students will find particularly helpful. Every chapter gives a thorough description of the basic theory, and a large selection of worked examples are explained in an understandable, tutorial style. Graded problems for solution, with answers, are also provided. Integrating statics and dynamics within a single volume, the book will support the study of engineering mechanics throughout an undergraduate course. The theory of two- and three-dimensional dynamics of particles and rigid bodies, leading to Euler's equations, is developed. The vibration of one- and two-degree-of-freedom systems and an introduction to automatic control, now including frequency response methods, are covered. This edition has also been extended to develop continuum mechanics, drawing together solid and fluid mechanics to illustrate the distinctions between Eulerian and Lagrangian coordinates. Supports study of mechanics throughout an undergraduate course Integrates statics and dynamics in a single volume Develops theory of 2D and 3D dynamics of particles and rigid bodies

In this book we are concerned with Bayesian learning and forecasting in dynamic environments. We describe the structure and theory of classes of dynamic models, and their uses in Bayesian forecasting. The principles, models and methods of Bayesian forecasting have been developed extensively during the last twenty years. This development has involved thorough investigation of

mathematical and statistical aspects of forecasting models and related techniques. With this has come experience with application in a variety of areas in commercial and industrial, scientific and socio-economic fields. In deed much of the technical development has been driven by the needs of forecasting practitioners. As a result, there now exists a relatively complete statistical and mathematical framework, although much of this is either not properly documented or not easily accessible. Our primary goals in writing this book have been to present our view of this approach to modelling and forecasting, and to provide a reasonably complete text for advanced university students and research workers. The text is primarily intended for advanced undergraduate and postgraduate students in statistics and mathematics. In line with this objective we present thorough discussion of mathematical and statistical features of Bayesian analyses of dynamic models, with illustrations, examples and exercises in each Chapter.

Exploring the intersections of Blackness, gender, fatness, health, and the violence of policing. To live in a body both fat and Black is to exist at the margins of a society that creates the conditions for anti-fatness as anti-Blackness. Hyper-policed by state and society, passed over for housing and jobs, and derided and misdiagnosed by medical professionals, fat Black people in the United States are subject to sociopolitically sanctioned discrimination, abuse, condescension, and trauma. Da'Shaun Harrison--a fat, Black, disabled, and nonbinary trans writer--offers an incisive, fresh, and precise exploration of anti-fatness as anti-Blackness, foregrounding the state-sanctioned murders of fat Black men and trans and nonbinary masculine people in historical analysis. Policing, disenfranchisement, and invisibilizing of fat Black men and trans and nonbinary masculine people are pervasive, insidious ways that anti-fat anti-Blackness shows up in everyday life. Fat people can be legally fired in 49 states for being fat; they're more likely to be houseless. Fat people die at higher rates from misdiagnosis or nontreatment; fat women are more likely to be sexually assaulted. And at the intersections of fatness, Blackness, disability, and gender, these abuses are exacerbated. Taking on desirability politics, the limitations of gender, the connection between anti-fatness and carcerality, and the incongruity of "health" and "healthiness" for the Black fat, Harrison viscerally and vividly illustrates the myriad harms of anti-fat anti-Blackness. They offer strategies for dismantling denial, unlearning the cultural programming that tells us "fat is bad," and destroying the world as we know it, so the Black fat can inhabit a place not built on their subjugation.

Public Relations and Social Theory broadens the theoretical scope of public relations through its application of the works of prominent social theorists to the study of public relations. The volume focuses on the work of key social theorists, including Jürgen Habermas, Niklas Luhmann, Michel Foucault, Ulrich Beck, Pierre Bourdieu, Anthony Giddens, Robert Putnam, Erving Goffman, Peter L. Berger, Gayatri Chakravorty Spivak, Bruno Latour, Leon Mayhew, Dorothy Smith and Max Weber. Unique in its approach, the collection demonstrates how the theories of these scholars come to bear on the understanding of public relations as a social activity. Understanding public relations in its societal context entails a focus on such concepts as trust, legitimacy, understanding, and reflection, as well as on issues of power, behavior, and language. Each chapter is devoted to an individual theorist, providing an overview of that theorist's key concepts and contributions, and exploring how these concepts can be applied to public relations as a practice. Each chapter also includes a box giving a short and concise presentation of the theorist, along with recommendation of key works and secondary literature. Overall, this volume will enhance understanding of theories and their applications in public relations, expanding the breadth and depth of the theoretic foundations of public relations. It will be of great interest to scholars and graduate students in public relations and strategic communication.
