In order to chart the way for long-term policies in the field of public health, the Dutch government needs to have the best possible insight into potential future trends and the problems to which these could give rise. It was with a view to compiling a number of long-range studies that the independent Steering Committee on Future Health Scenarios was set up in 1983. In 1985 the Steering Committee appointed a board of experts to conduct a long-range study of "Accidents and traumatology" (traumatology being that aspect of medicine concerned with the treatment of accident victims). In close consultation with this board, the Institute of Public Health and Social Medicine of the Erasmus University Rotterdam carried out a scenario study, the results of which are briefly summarized below.

0.1 Aims and approach The research had two objectives: To explore possible "autonomous" developments (in the sense of being independent of government intervention) in the field of accidents and the treatment of accident victims. To specify the effects of possible policy measures, in relation to both the prevention of accidents and improvements in the care for accident victims. The research was exploratory rather than predictive. It did not go beyond the year 2000, since it was felt that the pace of change in this field ruled out looking much further than ten to fifteen years ahead.

the regulations and how to apply them with this clear, easy-to-use guide to both safety practices and legal standards. The NSTA Ready-Reference Guide to Safer Science is a compendium of 39 "Scope on Safety" columns from Science Scope, NSTA's member journal for middle schools. Major sections cover safety practices and legal standards, on subjects as diverse as asbestos, ergonomics, and bloodborne pathogens, and instructional safety, including the challenges of occupancy loads, field trips, and safer science for special-needs students. Each section is divided into four parts: general science, chemistry, physical science, and biology. An appendix includes the NSTA position statements related to safer practices and resources and references from all the columns. But especially intriguing is the section devoted to questions teachers ask. Is it safe to allow backpacks, open-toe shoes, and long synthetic nails in the lab? Are microwave ovens safe to use for heating liquids for experiments? Can ether be safely used to anesthetize fruit flies in a lab? With this book on your shelf, you can quickly find out.

The Health and Safety (First Aid) Regulations 1981 apply to workplaces in the UK, including those with less than five employees, and to the self-employed.

Caregivers and teachers need to know what to do when a child is injured or becomes suddenly ill. Most injuries that require first aid care are not life-threatening. However, first aid can sometimes mean the difference between life

and death. This course is designed to give caregivers and teachers the education they need to effectively care for children.
