Robert Johnson is the subject of the most famous myth about the blues: he allegedly sold his soul at the crossroads in exchange for his incredible talent, and this deal led to his death at age 27. But the actual story of his life remains unknown save for a few inaccurate anecdotes. Up Jumped the Devil is the result of over 50 years of research. Gayle Dean Wardlow has been interviewing people who knew Robert Johnson since the early 1960s, and he was the person who discovered Johnson's death certificate in 1967. Bruce Conforth began his study of Johnson's life and music in 1970 and made it his mission to fill in what was still unknown about him. In this definitive biography, the two authors relied on every interview, resource and document, most of it material no one has seen before. As a result, this book not only destroys every myth that ever surrounded Johnson, but also tells a human story of a real person. It is the first book about Johnson that documents his years in Memphis, details his trip to New York, uncovers where and when his wife Virginia died and the impact this had on him, fully portrays the other women Johnson was involved with, and tells exactly how and why he died and who gave him the poison that killed him. Up Jumped the Devil will astonish blues fans who thought they knew something about Johnson.

Organized around the latest CACREP standards, Counseling Theory: Guiding Reflective Practice, by Richard D. Parsons and Naijian Zhang, presents theory as an essential component to both counselor identity formation and professional practice. Drawing on the contributions of current practitioners, the text uses both classical and cutting-edge theoretical models of change as lenses for processing client information and developing case conceptualizations and intervention plans. Each chapter provides a snapshot of a particular theory/approach and the major thinkers associated with each theory as well as case illustrations and guided practice exercises to help readers internalize the content presented and apply it to their own development as counselors.

This book makes a major contribution to knowledge and theory by drawing implications of teacher effectiveness research for the field of teacher training and professional

development. The first part of the book provides a critical review of research on teacher training and professional development and illustrates the limitations of the main approaches to teacher development such as the competence-based and the holistic approach. A dynamic perspective to policy and practice in teacher training and professional development is advocated. The second part of the book provides a critical review of research on teacher effectiveness. The main phases of this field of research are analysed. It is pointed out that teacher factors are presented as being in opposition to one another. An integrated approach in defining quality of teaching is adopted. The importance of taking into account findings of studies investigating differential teacher effectiveness is argued. Another significant limitation of this field of research is that the whole process of searching for teacher effectiveness factor was not able to have a significant impact upon teacher training and professional development. For this reason it is advocated that teacher training and professional development should be focused on how to address grouping of specific teacher factors associated with student learning and on how to help teachers improve their teaching skills by moving from using skills associated with direct teaching only to more advanced skills concerned with new teaching approaches and differentiation of teaching. The book refers to studies conducted in different countries illustrating how the proposed approach can be used by policy and practice in teacher education. Specifically, the book provides evidence supporting the validity of the theoretical framework upon which this approach is based. Moreover, experimental and longitudinal studies supporting the use of this approach for improvement purposes are presented and suggestions for further research utilising and expanding the Dynamic Approach for teacher training and professional development are provided.

Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb’s effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta’s family did not learn of her “immortality” until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta’s daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn’t her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.

This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct that might lead to intervention prior to the commission of the actual terrorist incidents. Illustrations.

In spite of the double burden of racial and gender discrimination, African-American women have developed a rich intellectual tradition that is not widely known. In *Black Feminist Thought*, Patricia Hill Collins explores the words and ideas of Black feminist intellectuals as well as those African-American women outside academe. She provides an interpretive framework for the work of such prominent Black feminist thinkers as Angela Davis, bell hooks, Alice Walker, and Audre Lorde. The result is a superbly crafted book that provides the first synthetic overview of Black feminist thought.
