A good mind knows the right answers...but a great mind knows the right questions. And never are the Best Questions more important than after a diagnosis of breast cancer. Drawing on cutting-edge research and original interviews -- including with former surgeon general C. Everett Koop, bestselling author Dr. Susan Love, well-known breast cancer survivors like Betty Rollin, and experts at the top cancer-care centers in the world -- The 10 Best Questions™ for Surviving Breast Cancer is a guide you'll take with you into your doctor's office and keep close to you through every step of your treatment and recovery. In addition to the medical questions, you'll also learn what you need to ask your friends, colleagues, and loved ones so that the rest of your life doesn't take a backseat to your diagnosis: "How many days I can afford to be out?" (p. 211) "What questions are my children likely to ask?" (p. 261) "When will I be comfortable being intimate again with my partner?" (p. 234) With a wealth of resources and up-to-the-minute information, The 10 Best Questions™ for Surviving Breast Cancer shows you how to move past a scary diagnosis and use the power of questions to become your own best advocate for your emotional, mental, physical, and financial health.

Throughout their lives, women have experiences and make decisions that can influence their chances of getting breast cancer. While we have little control over some of these risk factors, we can sometimes make choices - good or bad - that affect our risk of getting breast cancer. In a 2011 Institute of Medicine (IOM) report, obesity, alcohol consumptions, and some medical treatments were found to raise these risks at least a little. For other factors, the evidence wasn't as clear. Look through this question and answer booklet to learn more.

Written for the patient to empower her to learn more about options, deal with problems, and fight more effectively.

Since 2002, The Breast Reconstruction Guidebook has been the best resource on this topic for women who have had a mastectomy. Equal parts science and support, it is filled with stories that illustrate the emotional and physical components of breast reconstruction. Kathy Steligo, a gifted writer and breast cancer survivor who has twice had breast reconstruction, compassionately answers women's questions about how they will respond emotionally and physically to losing a breast, whether to treat or prevent breast cancer. Steligo provides detailed descriptions of the various surgical options for mastectomy and reconstruction, as well as information on choosing and paying for a surgeon, preparing for and recovering from surgery, and handling the many practical details and difficult decisions women will face along the way. A road map of the mastectomy and reconstruction journey, this book gives women the comprehensive, unbiased details they need to make their own informed decisions about whether reconstruction—and which reconstructive option—is right for them. Readers learn how breasts can be recreated using implants or their own tissue and the advantages and disadvantages of each option. Surgery timelines, recovery, and potential problems (and how they can be resolved) are also explained. A new foreword by Dr. Minas Chrysopoulo, MD, of the PRMA Plastic Surgery Center for Advanced Breast Reconstruction, highlights the book's strengths and offers a medical perspective on breast cancer and reconstructive surgery. The extensively updated text includes new discussions of • innovative reconstructive procedures • contralateral mastectomy • the benefits and limitations of nipple- and areola-sparing mastectomies • nipple delay procedure • patient-controlled tissue expansion • cohesive gel silicone implants • microsurgical advances that improve tissue flap procedures • fat grafting • nipple reconstruction • nipple and areola tattooing • reconstruction with the BRAVA system • pregnancy after TRAM • male mastectomy and reconstruction • decision making and solving cosmetic and medical post-op problems • surgical procedures that reduce the risk of cancer • the latest research data on mastectomy and reconstruction • and much more

There are approximately ten million people living with cancer, and more than half of them are women. Whether you're a newly diagnosed woman with cancer, a survivor, or a friend or relative of someone with cancer, this book offers help. The only text to provide both the patient's and doctor's views, this invaluable resource provides up-to-date, authoritative, practical answers to the most common questions asked by women with cancer and survivors, whether active or remissive.

Breast cancer remains the most common invasive cancer among women. The primary patients of breast cancer are adult women who are approaching or have reached menopause; 90 percent of new cases in U.S. women in 2009 were diagnosed at age 45 or older. Growing knowledge of the complexity of breast cancer stimulated a transition in breast cancer research toward elucidating how external factors may influence the etiology of breast cancer. Breast Cancer and the Environment reviews the current evidence on a selection of environmental risk factors for breast cancer, considers gene-environment interactions in breast cancer, and explores evidence-based actions that might reduce the risk of breast cancer. The book also recommends further integrative research into the elements of the biology of breast development and carcinogenesis, including the influence of exposure to a variety of environmental factors during potential windows of susceptibility during the full life course, potential interventions to reduce risk, and better tools for assessing the carcinogenicity of environmental factors. For a limited set of risk factors, evidence suggests that action can be taken in ways that may reduce risk for breast cancer for many women: avoiding unnecessary medical radiation throughout life, avoiding the use of some forms of postmenopausal hormone therapy, avoiding smoking, limiting alcohol

consumption, increasing physical activity, and minimizing weight gain. Breast Cancer and the Environment sets a direction and a focus for future research efforts. The book will be of special interest to medical researchers, patient advocacy groups, and public health professionals.
