Using data from the 1991 IEA (International Association for the Evaluation of Educational Achievement) Reading Literacy Study, a study compared United States fourth- and ninth-grade students to students in 32 other countries; examined relationships between reading comprehension and aspects of family, schooling, and community; and investigated the nature of reading instruction in American classrooms. National samples of classes at the grade level containing the most 9-year-olds and 14-year-olds were used. A "world average" was constructed of the 18 participating nations that are also members of the Organization for Economic Cooperation and Development (OECD). Results

indicated that (1) American fourth graders outperformed students from all other countries except Finland; (2) American ninth graders' performance was closely grouped with that of students from 15 other nations; (3) in the United States, White students read better than Black and Hispanic students; (4) most groups of American students outperformed the OECD average; (5) students whose parents did not finish high school read at about the same level as the OECD average at fourth grade, but fell below the average in the ninth grade; (6) when differences in wealth, race/ethnicity, level of parental education, and other related attributes were taken into account, children from one-parent mother-only families did as well as children from two-parent families; (7) parents' educational attainment influenced reading comprehension over and above other aspects of family background; (8) what teachers said they believed about reading instruction differed markedly from what they actually did and had students do. (Contains 70 references, 43 notes, 4 exhibits, 3 tables, and 29 figures of data.) (RS)

When over 900 followers of the Peoples Temple religious group committed suicide in 1978, they left a legacy of suspicion and fear. Most accounts of this mass suicide describe the members as brainwashed dupes and overlook the Christian and socialist ideals that originally inspired Peoples Temple members. Hearing the Voices of Jonestown restores the individual voices that have been

erased so that we can better understand what was created—and destroyed—at Jonestown, and why. Piecing together information from interviews with former group members, archival research, and diaries and letters of those who died there, Maaga describes the women leaders as educated political activists who were passionately committed to achieving social justice through communal life. The book analyzes the historical and sociological factors that, Maaga finds, contributed to the mass suicide, such as growing criticism from the larger community and the influx of an upper-class, educated leadership that eventually became more concerned with the symbolic effects of the organization than with the daily lives of its members. *Hearing the Voices of Jonestown* puts human faces on the events at Jonestown, confronting theoretical religious questions, such as how worthy utopian ideals come to meet such tragic and misguided ends.

"The author draws on numerous primary sources, which include Dempsey's previously unpublished accounts, and the views of those who knew him. The result reveals him to be a soldier of rare distinction, a talented sportsman and a man of huge charm and intellect. It examines his methods of command and his

relationship with Montgomery, his Corps commanders, the Americans and the RAF. Crucially this ... biography analyses why Dempsey's army performed so brilliantly on D-Day and examines his overall contribution to the campaign in Europe, focusing on the controversial operations of Epsom, Goodwood, Arnhem, and the Rhine Crossing"--Jacket.

For the second edition this popular collection on contemporary ethical issues has been expanded to nine sections. Abortion and euthanasia are now given expanded coverage, and there are new sections as well on assisted reproduction and commodification, and on ethics and the use of violence. The book is primarily composed of pieces by philosophers, chosen both for their intrinsic value and for their accessibility to students. But where relevant the collection also includes legal documents and non-philosophical writings that help to set issues in context for Canadian students. In all, Ethical Issues now includes sixty-six selections, thirty-nine of which are new to this edition. The editor has also provided extensive introductory material and questions for discussion.

During 1970 to 1971, Borzu and his people were faced with many difficulties. When the expected winter rains did not fall, pastures and crops shriveled. Unable to sell their starving livestock for any profit, Borzu's people saw their debts to urban merchants and moneylenders increase. At the same time, Iran exercised

more bureaucratic control over the Qashqa'i by applying new policies over migratory schedules and the allocation of scarce pastures, and by introducing non-Qashqa'i agriculturalists and livestock investors as legitimate land users. All these measures threatened the nomad's way of life and eventually undermined the role of headmen such as Borzu. Lois Beck details the vicissitudes endured by Borzu's people and the strategies he devised to cope with them.

During their 20 years of activity members of the Association for the Study of Internal Fixation (AO - ASIF) have made authoritative contributions to the development of internal and external fixation. The close collaboration of surgeons, basic researchers, metallurgists, engineers and the establishment of clinical documentation has made it possible to achieve a solid scientific basis for internal fixation. Clear definitions for the standardization of different types of osteosynthesis were possible: interfragmentary compression, splintage and buttressing as well as combinations of these three techniques. At the same time a scientific and workmanlike instrumentation was developed. The idea was to keep diversification within limits but, however, to assemble a comprehensive collection of implants and instruments to answer all the problems presented by the complexity of bone operations. Osteosynthesis is a difficult and demanding operative method. Its claims on the surgeon and the theatre staff are high.

Therefore plans have existed for a long time to supplement the "Manual of Internal Fixation" with a detailed description of the AO Instrumentation, its use and maintenance. Our collaborator FRIDOLIN SEQUIN, graduate engineer, has accomplished this task with expert knowledge. He has organized over many years courses for theatre nurses and has been able from the resulting experience to provide helpful suggestions. When RIGMOR TEXHAMMAR R. N. joined AO-International four years ago, it was natural to include her as a co-author. Subject coverage: general administration & management, consumerism, economics, marketing, PR & advertising

This book assesses the current state of knowledge about forest declines, particularly as they relate to air pollution. Many declines are shown to be unrelated to air pollution and, in other cases, the links between air pollution and the condition of the trees is extremely tenuous. Factors such as nutrient depletion due to past management practices and drought are shown to have had a major influence on the health of trees. In many cases, the evidence for a decline in tree condition is at best ambiguous, and much of the concern appears to have been generated by political and media interest rather than by a critical evaluation of the available data. A detailed examination of the comprehensive data collected in the British forest health monitoring program over the last five years indicates the complexity of the process involved and illustrates the dangers of taking data from a single year at face value. Many of the indices used to assess trees are of questionable value when compared over time or space, as their subjective nature precludes any reliable comparisons. Studies of annual increment and wood quality indicate that the international market for timber is unlikely to be affected in either the long or the short term.

"Hormegeddon" is the term coined by entrepreneur and New York Times Bestselling Author Bill Bonner to describe what happens when you get too much

of a good thing in the sphere of public policy, economics and business. Simply put, it ends in disaster. Drawing on stories and examples from throughout modern political history-from Napoleon's invasion of Russia to the impending collapse of the American healthcare system, from the outbreak of WWII and the fall of the Third Reich to the 21st century War on Terror, from the Great Recession to the sovereign debt crisis-Bonner pursues a modest ambition: to understand what goes wrong. History is not a clean yarn spun by its victors. It is a long tale of things that went FUBAR-debacles, disasters, and catastrophes. That each disaster carries with it a warning is what makes it useful to study. For instance, if the architect of a great ship tells you that 'not even God himself could sink this ship, ' you should take the next boat. If the stock market is selling at 20 times earnings and all the expert analysts urge you to 'get in' because you 'can't lose'-it's time to get out! Similarly, public policy disasters are what you get when well meaning people with this same Titanic degree of certitude apply rational, small-scale problem-solving logic to inappropriately large scale planning. First, you get a declining rate of return on your investment (of time or resources) until you hit zero. Then, if you keep going through the zero floor-and you always keep going-you get a disaster. The problem is, these disasters cannot be stopped by well-informed smart people with good intentions, because they are the people

who cause them in the first place. From the mind of Bill Bonner comes Hormegeddon, a phenomenon that occurs when a small dose of something produces a favorable result, but if you increase the dosage, the results end in disaster. The same applies when the world gets too much of a good thing in public policy, economics, and business. Drawing on examples throughout modern political history, Bonner brings context and understanding to this largely ignored and anonymous phenomenon.

Covering the proceedings of the 11th International Conference on Urban Regeneration and Sustainability held in Alicante, Spain, this volume addresses the multidisciplinary aspects of urban planning; a result of the increasing size of cities, the amount of resources and services required and the complexity of modern society. Most of the earth's population live in cities and the process of urbanisation still continues to generate problems originating from the drift of the population towards them. These problems can be resolved by cities becoming efficient habitats, saving resources in a way that improves the standard of living. The process faces a number of challenges related to reducing pollution and

improving main transportation and infrastructure systems. These challenges can contribute to the development of social and economic imbalances and require the development of new solutions. Large cities are probably the most complex mechanisms to manage, nevertheless they represent a productive ground for architects, engineers, city planners, and social and political scientists able to conceive new ideas and time them according to technological advances and human requirements. The Sustainable City XI follows a succession of very successful international conferences and covers the following fields: Urban planning and design; Urban development and management; Urban conservation and regeneration; The community and the city; Eco-town planning; Landscape planning and design; Environmental management; Sustainable energy and the city; Transportation Quality of life; Socio-economic and political considerations; Cultural quarters and interventions; Waterfront development; Case studies – sustainable practices; Architectural issues; Cultural heritage issues; Appropriate technologies for smart cities; Planning for resilience; Disaster and emergency response; Urban safety and security; Waste management; Urban infrastructure and Urban metabolism.

Researchers often do not analyze nonreplicated experiments statistically because they are unfamiliar with existing statistical methods that may be applicable. *Analysis of Messy Data, Volume II* details the statistical methods appropriate for nonreplicated experiments and explores ways to use statistical software to make the required computations feasible.

This book is an introduction to prayer, drawing on Eastern and Western traditions. Translated from the original Japanese into Dutch, French, German, Italian, Korean, and Spanish, *Awakening to Prayer* has already become a modern spiritual classic. In this simple yet profound book, Japanese Carmelite Augustine Ichiro Okumura explores the fundamental nature and root of prayer, the human and divine reality that underlies all praying. Drawing on the images, stories, and insights of Eastern and Western spiritual traditions, the author considers prayer as conversation, as listening, as resting in the divine. In a long chapter on the "anthropology of prayer," he discusses the relationship between prayer times and other daily activities, the need for both repeated ritual and

silence, the problem of distractions and deviations in prayer. The book culminates in a moving reflection on Christ's prayer and what it means to pray authentically as a Christian.

The spellbinding last full-length play produced during the author's lifetime is now published for the first time. Christmas 1982: Cornelius and Bella McCorkle of Pascagoula, Mississippi, return home one midnight in a thunderstorm from the Memphis funeral of their older son to a house and a life literally falling apart--daughter Joanie is in an insane asylum and their younger son Charlie is upstairs having sex with his pregnant, holy-roller girlfriend as the McCorkles enter. Cornelius, who has political ambitions and a litany of health problems, is trying to find a large amount of moonshine money his gentle wife Bella has hidden somewhere in their collapsing house, but his noisy efforts are disrupted by a stream of remarkable characters, both living and dead. While Williams often used drama to convey hope and desperation in human hearts, it was through this dark, expressionistic comedy, which he called a "Southern gothic spook sonata," that he was best able to chronicle his vision of the fragile state of our world.

Addresses the multi-disciplinary aspects of urban planning, a result of the increasing size of cities, the amount of resources and services required and the complexity of modern society. Innovative tools are required for identifying the high complexity of contemporary cities. It is

necessary to provide a more scientific approach to urban studies, inspired by Prigogine's theories of dissipative structures, and to highlight relations between different systems and between systems and the environment. The challenge of placing sustainable contemporary cities lies in considering the dynamics of urban systems, exchange of energy and matter and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems. The task of researchers, aware of the complexity of the contemporary city, is to increase the capacity to manage human activities pursuing welfare and prosperity in sustainable cities.
