Cathodic protection (CP) is used to prevent corrosion on many buried and submerged metallic structures such as underground pipes and tanks. Periodic testing is required to ensure proper CP system operation, but many Directorates of Public Works (DPWs) do not have sufficient resources to conduct such tests regularly. Several companies have begun manufacturing remote monitoring units (RMUs) for CP systems. The technology allows personnel to monitor multiple CP systems from a central location so problems can be detected and repaired immediately. RMUs from three manufacturers were evaluated during Phase I of this study (FEAP TR 97/76) to determine their effectiveness. Only one of them performed successfully. During Phase II, RMUs from two additional manufacturers were evaluated. Results showed that both of the systems from Phase II performed successfully and are suitable for use at Army installations.

Almost 30 years later, at the pinnacle of his success as founder and leader of Dell Technologies, he found himself embroiled in a battle for his company's survival. What he'd do next could ensure its legacy—or destroy it completely. Play Nice But Win is a riveting account of the three battles waged for Dell Technologies: one to launch it, one to keep it, and one to transform it. For the first time, Dell reveals the highs and lows of the company's evolution amidst a rapidly changing industry—and his own, as he matured into the CEO it needed. With humor and humility, he recalls the mentors who showed him how to turn his passion into a business; the competitors who became friends, foes, or both; and the sharks that circled, looking for weakness. What emerges is the long-term vision underpinning his success: that technology is ultimately about people and their potential. More than an honest portrait of a leader at a crossroads, Play Nice But Win is a survival story proving that while anyone with technological insight and entrepreneurial zeal might build something great—it takes a leader to build something that lasts.
