“A rich history of a company whose cars, for better and worse, have touched millions of lives, a character study of a brilliant but deeply flawed leader, and a case study in how a corporate culture can turn toxic.” —Bethany McLean, New York Times Book Review *Faster, Higher, Farther* chronicles a corporate scandal that rivals those at Enron and Lehman Brothers—one that will cost Volkswagen more than \$22 billion in fines and settlements. Through meticulous reporting, New York Times correspondent Jack Ewing documents why VW felt compelled to install “defeat devices” in diesel vehicles that unlawfully lowered CO2 levels during emissions testing, and how the fraud was committed, covered up, and finally detected. *Faster, Higher, Farther* is a briskly written account of unrivaled corporate greed. Updated with the latest information and a new afterword by the author.

This volume centers on the idea that innovative approaches for energy access can work with previously underutilized or unrecognized resources, as this may lead to circumstances for the development of successful and sustainable energy programs. Such untapped resources may be seen in the discovering of synergies in areas such as pre-existing service infrastructures, supply chain and value chain management, natural resource availability, financing schemes, and leap frog technologies. Additionally, decentralized approaches can contribute to climate change adaptation measures and increase resiliency for vulnerable communities. Of course small-scale solutions have clear limitations in regard to global climate, and it is important to consider how far they can extend and aggregate impact. This book assembles a selection of articles, collected from the 2014 Energy Access Conference at UC Berkeley, aiming to consider technical, financial, human, institutional, and natural resource capital. Im Fokus der Konferenz "Innovating Energy Access for Remote Areas: Discovering Untapped Resources", die vom 10. bis zum 12. April 2014 an der University of California stattfand, war der Zugang zu moderner Energieversorgung in strukturschwachen Regionen. Dieser Tagungsband trägt eine Reihe von innovativen Ansätzen zusammen, die auf der Konferenz diskutiert wurden. In den Beiträgen spiegeln sich aktuelle Konzepte, Theorien, Methoden und Techniken im Bereich der dezentralen Energieversorgung. Im Mittelpunkt vieler Beiträge steht die Frage, wie sich vormals ungenutzte oder unbekannte lokale Ressourcen nutzbar machen lassen. Neue Potentiale ergeben sich aus Synergien zwischen supply and value innovation, neuen Finanzierungsansätzen und der Nutzung sogenannte „leapfrog technologies“. Die Beiträge zeigen, wie dezentrale Ansätze und kleinteilige lokale Lösungen zur Bekämpfung des Klimawandels und die Anpassung an seine Folgen beitragen und die Resilienz gefährdeter Gemeinschaften stärken können.
