Corporate Finance, by Ross, Westerfield, and Jaffe is a popular textbook that emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life.

The authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics.

They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return, and use them to explain corporate finance with a balance of theory and application. The well-respected author team is known for their clear, accessible

presentation of material that makes this text an excellent teaching tool. Brad Jordan, known for his successful work on the RWJ Fundamentals and Essentials books, contributed to this edition. His influence will be seen particularly in the writing style with smoother coverage of topics, and the increased quality in the problem material.

precision and clarity, the basic concepts, theories and practices of international business. The text is so significant because, in today's modern globalized economic environment, international transactions form an integral part of economic activities. Businesses today are no more confined to national boundaries and have become truly international. Any budding or practising manager, especially of big companies, needs to know the fundamentals of international finance. And this book, written by Professor S. Kevin, who has a rich and long experience in teaching international finance, eminently fulfils this need. The book begins with an explanation of the exchange rate mechanism of foreign currencies, factors influencing exchange rate fluctuations, and the trading mechanism in foreign exchange markets. As currency forwards, futures, options and swaps are the instruments of currency derivatives used as hedging and speculative tools, the book goes on to give a detailed description of the use of currency derivatives for hedging as well as speculative functions. It concludes with an analysis of international financial institutions and their functioning, the participants and instruments of global financial markets where international funds are raised, the many uses of international funds in the form of portfolio investments, and direct investments in host countries. The book is primarily intended as a text for postgraduate students of commerce and management, chartered accountancy (CA) and chartered financial analysis (CFA). It would also be of immense value to practising professionals in the field of international finance. Key Features : Illustrates the concepts with the
