No longer are heavy, sturdy, expensive mounts and tripods required to photograph deep space. With today's advances in technology, all that is required is an entry-DSLR and an entry level GoTo telescope. Here is all of the information needed to start photographing the night sky without buying expensive tracking mounts. By using multiple short exposures and combining them with mostly 'freeware' computer programs, the effect of image rotation can be minimized to a point where it is undetectable in normal astrophotography, even for a deep-sky object such as a galaxy or nebula. All the processes, techniques, and equipment needed to use inexpensive, lightweight altazimuth and equatorial mounts and very short exposures photography to image deep space objects are explained, step-by-step, in full

detail, supported by clear, easy to understand graphics and photographs. Currently available lightweight mounts and tripods are identified and examined from an economic versus capability perspective to help users determine what camera, telescope, and mount is the best fit for them. A similar analysis is presented for entry-level telescopes and mounts sold as bundled packages by the telescope manufacturers. This book lifts the veil of mystery from the creation of deep space photographs and makes astrophotography affordable and accessible to most amateur astronomers.

In this updated, second edition of the authoritative, bestselling *Mastering Canon EOS Flash*

Photography, photographer NK Guy brings the book fully up to date, with coverage of all the newest

Canon gear that has hit the market since the first edition published in 2010. This includes coverage of

the radio-enabled Canon Speedlite 600EX-RT and Canon Speedlite Transmitter ST-E3-RT, as well as

the other Speedlites that have released since the first edition's publication: Canon Speedlite 90EX,

270EX II, 320EX, and 600EX. And this is the first book to cover Canon's new, affordable master

unit—the Speedlite 430EX III-RT flash! Digital cameras and flash technology have truly

revolutionized photography in the 21st century.

Originally seen simply as a practical way to

illuminate dark scenes with portable light, flash today

is used for a host of creative and nuanced

applications, including supplementing daylight,

designing complex scenes lit by multiple light

sources, and simply creating beautiful, controllable light for portraiture. With LCD screens on DSLRs,

the ability to get instant feedback on lighting setups is a great help in advancing one's lighting

capabilities and encouraging experimentation.

However, flash photography can still be a difficult artistic and technical challenge. It's simple to get

that harsh deer-in-the-headlights look from built-in

automatic flash, but it is a far cry from beautiful light. Creating natural-looking images is not nearly as straightforward. Mastering the properties of light and the ability to manipulate, craft, and direct it is a lifelong endeavor. Those diving into Speedlights need some help. Manuals are terse and the terminology is confusing—this is where *Mastering Canon EOS Flash Photography* comes in. This is the complete book on the subject, guiding you through Canon's Speedlite system, from off-camera portable flash to professional studio lighting. It covers the fundamentals of flash metering technology, discusses key lighting concepts, and documents a wide range of Canon and third-party equipment. Universal flash accessories, studio gear, and radio triggers are all thoroughly covered. The book is lavishly illustrated with diagrams that demonstrate important functions and lighting arrangements, and inspiring photos that show sophisticated flash techniques. Though tailored for users of Canon EOS cameras, owners of other camera systems will find much valuable information as well. So, whether you're just getting started with flash, or you've picked up the bug for off-camera lighting from such popular websites as Strobist.com, or you're making the leap into advanced studio work, *Mastering Canon EOS Flash Photography* is your in-depth resource. Includes a foreword by David Hobby, noted photojournalist and founder of Strobist.com.
