Governments spend huge amounts of money buying goods and services from the private sector. How far should their spending power be affected by social policy? Arguments against the practice are often made by economists - on the grounds of inefficiency - and lawyers - on the grounds of free competition and international economic law. *Buying Social Justice* analyses how governments in developed and developing countries use their contracting power in order to advance social equality and reduce discrimination, and argues that this approach is an entirely legitimate, and efficient means of achieving social justice. The book looks at the different experiences of a range of countries, including the UK, the USA and South Africa. It also examines the impact of international and regional regulation of the international economy, and questions the extent to which the issue of procurement policy should be regulated at the national, European or international levels. The role of EC and WTO law in mediating the tensions between the economic function of procurement and the social uses of procurement is discussed, and the outcomes of controversies concerning the legitimacy of the integration of social values into procurement are analysed. *Buying Social Justice* argues that European and international legal regulation of procurement has become an important means of accentuating the positive and eliminating the negative in both the social and economic uses of procurement. This is the only book to offer a detailed chronology of modern Soviet naval operations set within the framework of long-range Soviet foreign and domestic policy. This context is important because it puts the navy in its proper place as a significant cog in the gigantic machinery of Soviet "grand strategy." Commander Watson argues that the Soviet Navy's physical configuration, strategy, and operations reflect a long-term "upgrading" pattern, designed to create an equal-partner status in the total balance of Soviet military forces. Changes in the navy's activities are not merely pragmatic reactions to momentary crises or shifts in world power trends. The navy has played an integral part in implementing the four strategic long-range goals of Soviet policy: defense of the Soviet Union, enhancement of its international position, establishment and maintenance of Soviet military superiority internationally, and the promotion of other Communist revolutions. Commander Watson discusses in detail Soviet naval operations in all of the world's oceans. He provides new insight into the dimensions of Soviet naval presence and port visit activity, using vast amounts of statistical material gathered from his original research. The text is supplemented by maps, photographs, and extensive tabular documentation.
