In the fall of 1930, David Packard left his hometown of Pueblo, Colorado, to enroll at Stanford University, where he befriended another freshman, Bill Hewlett. After graduation, Hewlett and Packard decided to throw their lots in together. They tossed a coin to decide whose name should go first on the notice of incorporation, then cast about in search of products to sell. Today, the one-car garage in Palo Alto that housed their first workshop is a California historic landmark: the birthplace of Silicon Valley. And Hewlett-Packard has produced thousands of innovative products for millions of customers throughout the world. Their little company employs 98,400 people and boasts constantly increasing sales that reached \$25 billion in 1994. While there are many successful companies, there is only one Hewlett-Packard, because from the very beginning, Hewlett and Packard had a way of doing things that was contrary to the prevailing management strategies. In defining the objectives for their company, Packard and Hewlett wanted more than profits, revenue growth and a constant stream of new, happy customers. Hewlett-Packard's success owes a great deal to many factors, including openness to change, an unrelenting will to win, the virtue of sustained hard work and a company-wide commitment to community involvement. As a result, HP now is universally acclaimed as the world's most admired technology company; its wildly successful approach to business has been immortalized as The HP Way. In this book, David Packard tells the simple yet extraordinary story of his life's work and of the truly exceptional company that he and Bill Hewlett started in a garage 55 years ago.

This textbook covers basic principles of equilibrium behavior for systems of interest to chemical engineering, including elementary microscopic concepts. A strong emphasis is placed on fundamentals: energy conservation in open and closed systems (first law), temperature, entropy and reversibility (second law), fundamental equations, and criteria for equilibrium and stability. These concepts are then applied to the analysis of energy conversion processes, mixing, phase equilibria, and chemical reactions. Using a simple approach to help kids master the basics of the Spanish language, this workbook concentrates on sentence structure, vocabulary, pronunciation, and verbs. Packed with activities that teach sight-reading and translation skills. Reproducible. Consumable.

This publication traces the corporate path to power and influence in the modern world, and explores whether corporations of the future will become superpowers in their own right or, like the dinosaurs, give way to superior forms. It examines how the emergence of empire-building firms in 16th century Europe gave way to the dominance of American corporations in the 19th and 20th centuries, which is now under threat as new types of corporations arise in China and elsewhere. The book offers surprising insights, such as why the explorer Sebastian Cabot incorporated while Christopher Columbus did not, how the US Constitution's silence on corporations gave rise to America's industrial dominance, and how a 19th century company making matches emerged as the Amazon of its day only to later lose its technological edge. It also discusses the many ways in which societies attempt to reign in corporate power, and the strategies of corporations to bypass controls. The text, furthermore, considers the startling ways in which new social movements, emerging business models and developing technologies—from bitcoin to artificial intelligence—will shape the corporations of the future. This book will introduce readers to the legal concept of a corporation, along with the economic and societal factors that gave rise to it as the primary means of conducting business in the modern world. With its broad sweep of history, current relevance, and insightful look to the future, this text will appeal to both scholarly and general audiences.

The line began forming after eight o'clock. Sal, short and heavy-set, kept everyone busy. Neat, in a white shirt and sports jacket, with his grey fedora cocked to the side, his crooked grin made you smile. Without warning the heavy door would swing open and the waiters would come outside to join him. They were dressed in pajamas or prison garb, with hats and horns, and were there to warm up the crowd. Some in line expected this, others were shocked. The pink polka dot building should have been a warning. Complete strangers in line became chummy, exchanging stories they had heard; toilet seat covers to serve drinks on, microphones in the ladies room, toilet paper for napkins. Most had brought their friends there to be roasted. The line of people varied in age. They all dressed casually because they'd heard you could get a pie in the face or a squirt in the eye. The club's routines were blue in color, but harmless. If you were lucky you might see a "Balls for the Queen" or a "Singing beer." The price was always right for a good time and Warm Beer and Lousy Food was the place to be.

How better information and better access to it improves the quality of our decisions and makes for a more vibrant participatory society. Information is power. It drives commerce, protects nations, and forms the backbone of systems that range from health care to high finance. Yet despite the avalanche of data available in today's information age, neither institutions nor individuals get the information they truly need to make well-informed decisions. Faulty information and sub-optimal decision-making create an imbalance of power that is exaggerated as governments and corporations amass enormous databases on each of us. Who has more power: the government, in possession of uncounted terabytes of data (some of it obtained by cybersnooping), or the ordinary citizen, trying to get in touch with a government agency? In *Missed Information*, David Sarokin and Jay Schulkin explore information—not information technology, but information itself—as a central part of our lives and institutions. They show that providing better information and better access to it improves the quality of our decisions and makes for a more vibrant participatory society. Sarokin and Schulkin argue that freely flowing information helps systems run more efficiently and that incomplete information does just the opposite. It's easier to comparison shop for microwave ovens than for doctors or hospitals because of information gaps that hinder the entire health-care system. Better information about such social ills as child labor and pollution can help consumers support more sustainable products. The authors examine the opacity of corporate annual reports, the impenetrability of government secrets, and emerging techniques of “information foraging.” The information imbalance of power can be reconfigured, they argue, with greater and more meaningful transparency from government and corporations.

This book examines what value, if any, the state has for the pursuit of progressive politics; and how it might need to be reimagined and remade to deliver transformative change. Is it possible to reimagine the state in ways that open up projects of political transformation? This interdisciplinary collection provides alternative perspectives to the 'antistatism' of much critical writing and contemporary political movement activism. Contributors explore ways of reimagining the state that attend critically to the capitalist, neoliberal, gendered and racist conditions of contemporary politics, yet seek to hold onto the state in the process. Drawing on postcolonial, poststructuralist, feminist, queer, Marxist and anarchist thinking, they consider how states might be reread and reclaimed for radical politics. At the heart of this book is state plasticity – the capacity of the state conceptually and materially to take different forms. This plasticity is central to transformational thinking and practice, and to the conditions and labour that allow it to take place. But what can reimagining do; and what difficulties does it confront? This book will appeal to academics and research students concerned with critical and transformative approaches to state theory, particularly in governance studies, politics and political theory, socio-legal studies, international relations, geography, gender/sexuality, cultural studies and anthropology.
