Health information technologies are revolutionizing and streamlining healthcare, and uptake continues to rise dramatically. If these technologies are to be effectively implemented, capacity must be built at a regional, national and global level, and the support and involvement of both government and industry will be vital. This book presents the proceedings of the 2017 Information Technology and Communications in Health conference (ITCH 2017), held in Victoria, BC, Canada, in February 2017. The conference considers, from a variety of perspectives, what is required to move the technology forward to real, sustained and widespread use, and the solutions examined range from improvements in usability and training to the need for new and improved design of information systems, user interfaces and interoperable solutions. Government policies, mandates, initiatives and the need for regulation are also explored, as is the requirement for improved interaction between industrial, governmental and academic partners. With its focus on building the next generation of health informatics and the capacity required to deliver better healthcare

worldwide, this book will be of interest to all those involved in the provision of healthcare.

The PPCP manual is a best practice document that provides step-by-step directions for the implementation of a paramedic psychomotor competency student portfolio.

Examines the relationship between the law and the school-to-prison pipeline, argues that law can be an effective weapon in the struggle to reduce the number of children caught, and discusses the consequences on families and communities.

The 1st edition of *Structural Fire Fighting: Initial Strategy and Tactics* is intended to provide fire personnel with the knowledge needed to deploy resources in the first 10 minutes of any structural fire incident. The manual is designed to help the reader develop a logical decision-making process for determining incident priorities, strategies, and tactics regardless of the available resources or configuration of the emergency services organization. Scenarios for residential, commercial, and special hazard incidents are included with recommended best practices and considerations. Training officers can use these scenarios, modified to local resources and realities, to develop classroom discussions or field

simulations. This manual is a companion to Structural Fire Fighting: Truck Company Skills and Tactics, 2nd edition and the soon to be released Structural Fire Fighting: High Rise Fire Fighting. Each chapter of the manual contains learning objectives, key terms, and review questions to assist the reader in understanding the material.

This book deconstructs and analyzes the impact of education-based trauma. Drawing on wisdom from the fields of education, psychology, neuroscience, history, political science, social justice, and philosophy, Gray connects the dots across different forms of education trauma that can occur throughout a student's life: from bullying and anxiety to social inequity and the school-to-prison pipeline. With respect to learning, memory, social group dynamics, democracy, and mental health, this book serves as a call-to-arms, demanding civil rights for all students and for education to fulfill its ultimate duty as a force for the common good.

In order to help pastors and other Christian leaders to lovingly lead God's flock to Jesus Christ and into God's mission, Scott Thomas and Tom Wood clarify a process of coaching and shepherding that is rooted in the patterns of the Good Shepherd himself, a process in which leaders stir up the gifts, passion, and calling upon others' lives. This book addresses the needs of the leader, his or her sinful tendencies, and church leadership issues. It directs the leader to the person and work of Jesus. It provides a system to intentionally shepherd leaders to glorify God in their personal, spiritual, and missional lives. Many ministry leaders

servicing in churches find themselves overwhelmed, disillusioned, and depressed by the enormous and challenging task of leading and ministering in a congregation. As a result, the ministry suffers, the leaders suffer, and the result is often an unhealthy church existent with little or no Gospel influence. These leaders need someone to shepherd their soul so that they can lead others to the Chief Shepherd, Jesus Christ. We suggest that coaching for the church leader looks less like corporate consulting or humanistic psychology and more like biblical-shepherding. We suggest that every church leader needs a Gospel Coach to come alongside with words of truth, wisdom and experience to encourage, admonish, comfort and help—words drawn from Scripture and godly wisdom, grounded in the gracious saving work of Jesus Christ, and presented in the context of a trusting relationship. Gospel Coaching is an intentional relationship to skillfully care for others with four ancient shepherding principles: 1) Know the sheep, 2) Feed the sheep, 3) Lead the sheep, and 4) Protect the sheep. A Gospel Coach both inquires about the personal, spiritual, and missional aspects of a ministry leader's life in a loving yet focused manner, and also probes the church leader for compulsive unbelief or selfish motivation, or disobedience and sin, and leads the ministry leader back to the Gospel, through belief, repentance and obedience. Churches that desire to be rich in a Gospel application toward their city, their relationships with one another, their communication and worship, as well as their service, will benefit to a greater degree by having their

leaders being coached by a Gospel-centered leader. Provides four practice tests based on official national standards, including answers and explanations

With his “deeply informed and compassionate book...Dr. Epstein tells us that it is a ‘moral imperative’ [for doctors] to do right by their patients” (New York Journal of Books). The first book for the general public about the importance of mindfulness in medical practice, *Attending* is a groundbreaking, intimate exploration of how doctors approach their work with patients. From his early days as a Harvard Medical School student, Epstein saw what made good doctors great—more accurate diagnoses, fewer errors, and stronger connections with their patients. This made a lasting impression on him and set the stage for his life’s work—identifying the qualities and habits that distinguish master clinicians from those who are merely competent. The secret, he learned, was mindfulness. Dr. Epstein “shows how taking time to pay attention to patients can lead to better outcomes on both sides of the stethoscope” (Publishers Weekly). Drawing on his clinical experiences and current research, Dr. Epstein explores four foundations of mindfulness—Attention, Curiosity, Beginner’s Mind, and Presence—and shows how clinicians can grow their capacity to provide high-quality care. The commodification of health care has shifted doctors’ focus away from the healing of patients to the bottom line. Clinician burnout is at an all-time high. *Attending* is the antidote. With compassion and intelligence, Epstein offers “a concise guide to his view of what mindfulness is, its value, and how it is a skill that anyone can work to

acquire” (Library Journal).

As the importance of electronic and digital devices in the provision of healthcare increases, so does the need for interdisciplinary collaboration to make the most of the new technical possibilities which have become available. This book presents the proceedings of the 13th International Conference on Nursing Informatics, held in Geneva, Switzerland, in June 2016. This biennial international conference provides one of the most important opportunities for healthcare professionals from around the world to gather and exchange expertise in the research and practice of both basic and applied nursing informatics. The theme of this 13th conference is eHealth for All: Every Level Collaboration – From Project to Realization. The book includes all full papers, as well as workshops, panels and poster summaries from the conference. Subjects covered include a wide range of topics, from robotic assistance in managing medication to intelligent wardrobes, and from low-cost wearables for fatigue and back stress management to big data analytics for optimizing work processes, and the book will be of interest to all those working in the design and provision of healthcare today.
