Metacognitive therapy is based on the principle that worry and rumination are universal processes leading to emotional disorder. These processes are linked to erroneous beliefs about thinking and unhelpful self-regulation strategies. Metacognitive Therapy: Distinctive Features is an introduction to the theoretical foundations and therapeutic principles of metacognitive therapy. Divided into two sections, Theory and Practice and using thirty key points, the authors explore how metacognitive therapy can allow people to escape from repetitive thinking patterns that often lead to prolonged psychological distress. This book is a valuable resource for both students and practitioners wishing to develop a basic understanding of metacognitive therapy and how it compares and contrasts with traditional forms of cognitive behavioural therapy.

practice. Taking a case-based approach, it examines pacemakers, implantable cardioverter defibrillators and cardiac resynchronisation therapy. Much more than just a technical manual of device algorithms, the cases help readers to consolidate their technical knowledge, and improve their reasoning and observation skills so they are able to tackle device troubleshooting with confidence. The 70 cases are arranged in three sections by increasing levels of difficulty to walk readers through all the skills and knowledge they need in an easy to use and structured format. Each case contains a short clinical description and a device tracing followed by a multiple choice question. Answers are supplied with detailed annotations of the tracing and an in-depth discussion of the case, highlighting practical hints and tips as well as providing an overview of the technical function of devices. A useful summary of principal device features and functions is also included. The EHRA Book of Pacemaker, ICD and CRT Troubleshooting is the perfect companion for electrophysiologists, cardiology trainees and technical consultants working with device patients as well as for those studying for the EHRA accreditation exam in cardiac pacing.

trainees can revise alone or with their peers to identify the areas in which they need further development. The curriculum is divided into three main areas where trainees require expert level of knowledge, high level of knowledge and general level of knowledge. It covers important clinical problems encountered in everyday emergency medicine practice – from cardiovascular emergencies through to obstetric and gynaecology emergencies, disaster management and toxicology. As well as being ideal for emergency medicine trainees qualifying through AECM, the book is a useful resource for GPs taking the GEM qualification through ACEM and JMOs 'on call'. Plus, this emergency medicine text is accompanied by an app – a separate product containing 180 randomised multiple-choice questions on all the topics within the book. Critical Care MCQs is the perfect companion for anyone sitting exams in intensive care, as a training resource or just wanting to improve their knowledge in this constantly developing area of medical practice. Written by critical care doctors with experience of UK and European examination formats, this book leads the reader through 450 true/false questions with referenced explanations, covering core syllabus topics and key influential papers to date. A detailed list of further resources and recommendations relevant to critical care revision is also provided to enable readers to further their knowledge and understanding. It is hoped that this book will prove invaluable for preparation and success in upcoming intensive care exams for both candidates and trainers. This book would be useful for not only candidates sitting the UK Final

an innovative form of cognitive-behavioral therapy with a growing empirical evidence base. MCT developer Adrian Wells shows that much psychological distress results from how a person responds to negative thoughts and beliefs—for example, by ruminating or worrying—rather than the content of those thoughts. He presents practical techniques and specific protocols for addressing metacognitive processes to effectively treat generalized anxiety disorder, obsessive-compulsive disorder, posttraumatic stress disorder, and major depression. Special features include reproducible treatment plans and assessment and case formulation tools, plus a wealth of illustrative case material.
