Presidents consult civic and religious leaders; everyone seems to be wrestling with the problems of racial prejudice, yet solutions evade us. What does race really mean? Are there really multiple races of humans? Where did this concept originate?

From 1975 to 1979, author William Cohen studied under one of the greatest management educators and thought-leaders of all time: Peter Drucker. What

Drucker taught him literally changed his life. Now, in this warm and inspiring read, Cohen shares the insights he gained as the first-ever graduate of Drucker's doctoral program and teaches readers how Drucker's game-changing ideas stand the test of time in the face of real-world workplace challenges today. A Class with Drucker shares many of Drucker's teachings that never made it into his countless books and articles--ideas that were offered to his students in classroom or informal settings. Cohen expands on Drucker's lessons with personal anecdotes about his teacher's personality, lack of pretension, and interactions with students and others. Having gone on from Drucker's teachings to become an Air Force general and eventually professor, management consultant, multibook author, and university president, Cohen is a testament to the lifechanging impact of Drucker's teachings and friendship. Enlightening and intriguing, this book allows you, too, to learn and grow from the timeless wisdom of a most inspiring man.

Nanotechnologies: Concepts, Processing and Applications describes and explains how nanotechnologies have entered our everyday lives through scientific and industrial applications with the emphasis placed on the new perspectives in various fields related to societal problems. This book details how successive discoveries of new nanocarbon structures along with progress in different microscopy techniques have caused nanomaterials to take on an increasingly important role in electronics, electrochemical energy storage – batteries and fuel cells – and the electrical conversion of solar energy. Views once seen as futuristic on nanomachines and nanorobotics, therapeutic hopes and medical advances – such as those resulting from the application of new in-situ drug-delivery nanotechniques – are all presented. The most innovative developments are analyzed in terms of applications and should enable the reader to form his or her own opinion about the reality of the progress that can be expected from nanotechnologies in the near future. The book offers background reading for teachers in colleges who wish to have an overview on this subject.

The changes of populations are determined by fertility, mortality and migration. On the national level, international migration is a factor of increasing demographic, economic, social and political importance. This book addresses the debate on the impact of international migration and economic activity on population and labour force resources in future. It presents a study conducted for 27 European countries, looking 50 years ahead (2002-2052). An extended discussion of theories and factors underlying the assumed evolution of the components of

change and economic activity is included as well as a detailed analysis of the historical trends. These theoretical and empirical considerations lead to defining scenarios of future mortality, fertility, economic activity and international migration, which have been fed into a projection model, producing various future population dynamics and labour force trajectories. In addition, simulations have been made to estimate the size of replacement migration needed to maintain selected demographic and labour market parameters in the countries of Europe. The results presented in this book allow researchers, governments and policy makers to evaluate to what extent various migration and labour market policies may be instrumental in achieving the desired population and labour size and structures. The secondary purpose of this volume is to reveal the methodology and argumentation lying behind a complex population forecasting and simulation exercise, which is not done frequently, but is critical for the assessment of the forecasts and also valuable from a purely didactic point of view.

Dr. Dobson's suggestions for marital happiness are interesting, practical, and humorous. From the pen of Charles Spurgeon: This year we will gather heavenly fruit on earthly ground, where faith and hope have turned the desert into the Lord's garden.
