The Learner-Centered Classroom and Schools shows educators and administrators how they can create classrooms and schools that foster student motivation, learning, and achievement. The learner-centered approach provides a dual focus on both learner and learning. It focuses on learners by respecting them, trusting them to be responsible for their own learning, and designing practices that are sensitive to individual needs, abilities, and interests. It focuses on learning by designing practices that help students meet high academic standards in challenging, personally relevant, and important content areas. The book is filled with useful examples and practical suggestions for implementing learner-centered concepts in any school or classroom. It will help educators examine beliefs and assumptions related to learner-centered practices and make changes that enhance student motivation and achievement. In the sociopolitics of language, sometimes yesterday's solution is tomorrow's problem. This volume examines the evolving nature of language acquisition planning through a collection of papers that consider how decisions about language learning and teaching are mediated by a confluence of psychological, ideological, and historical forces. The first two parts of the volume feature empirical studies of formal and informal education across the lifespan and around the globe. Case studies map the agents, resources, and attitudes needed for creating moments and spaces for language learning that may, at times, collide with wider beliefs and policies that privilege some languages over others. The third part of the volume is devoted to conceptual contributions that take up theoretical issues related to epistemological and conceptual

These contributions reflect on the full spectrum of social and cognitive factors that intersect with the planning of language teaching and learning including ethnic and racial power relations, historically situated political systems, language ideologies, community language socialization, relationships among stakeholders in communities and schools, interpersonal interaction, and intrapersonal development. In all, the volume demonstrates the multifaceted and socially situated nature of language acquisition planning.

Budget literacy is defined as 'the ability to read, decipher, and understand public budgets to enable and enhance meaningful citizen participation in the budget process'. It is comprised of two main parts - (i) a technical understanding of public budgets, including familiarity with government spending, tax rates and public debt and; (ii) the ability to engage in the budget process, comprising of practical knowledge on day-to-day issues, as well as an elementary understanding of the economic, social and political implications of budget policies, the stakeholders involved and when and how to provide inputs during the annual budget cycle. Given that no international standards or guidelines have been established for budget literacy education to date, this book seeks to address this gap by taking stock of illustrative initiatives promoting budget literacy for youth in selected countries. The underlying presumption is that when supply-side actors in the budget process -- governments -- simplify and disseminate budget information for demand-side actors -- citizens -- this information will then be used by citizens to provide feedback on the budget. However, since citizens are often insufficiently informed about public budgets to constructively participate in budget processes one way to empower them and to remedy the problem of "budget illiteracy" is to provide budget-literacy education in schools to youth, helping them evolve into civic-minded adults with the essential knowledge needed for analyzing their government's fiscal policy objectives and measures, and the confidence and sense of social responsibility to participate in the oversight of public resources. This book elaborates on approaches, learning outcomes, pedagogical strategies and assessment approaches for budget literacy education, and presents lessons that are relevant for the development, improvement, or scaling up of budget literacy initiatives.
