Our civilisation stands on the brink of catastrophe. Our thirst for energy has led to threats from global warming, nuclear disaster and conflict in oil-rich countries. We are running out of options. Solar power, Keith Barnham argues, is the answer. In this eye-opening book, he shows how a solar revolution is developing based on one of Einstein's lesser known discoveries, one that gave us laptop computers and mobile phones. An accessible guide to renewable technology and a hard-hitting critique of the arguments of solar sceptics, *The Burning Answer* outlines a future in which the fuel for electric cars will be generated on our rooftops. It is, above all, an impassioned call to arms to join the solar revolution before it's too late.

Aimed at senior undergraduates and first-year graduate students, this book offers a principles-based approach to inorganic chemistry that, unlike other texts, uses chemical applications of group theory and molecular orbital theory throughout as an underlying framework. This highly physical approach allows students to derive the greatest benefit of topics such as molecular orbital acid-base theory, band theory of solids, and inorganic photochemistry, to name a few. Takes a principles-based, group and molecular orbital theory approach to inorganic chemistry. The first inorganic chemistry textbook to provide a thorough treatment of group theory, a topic usually relegated to only one or two chapters of texts, giving it only a cursory overview. Covers atomic and molecular term symbols, symmetry coordinates in vibrational spectroscopy using the projection operator method, polyatomic MO theory, band theory, and Tanabe-Sugano diagrams. Includes a heavy dose of group theory in the primary inorganic textbook, most of the pedagogical benefits of integration and reinforcement of this material in the treatment of other topics, such as frontier MO acid-base theory, band theory of solids, inorganic photochemistry, the Jahn-Teller effect, and Wade's rules are fully realized. Very physical in nature compared to other textbooks in the field, taking the time to go through mathematical derivations and to compare and contrast different theories of bonding in order to allow for a more rigorous treatment of their application to molecular structure, bonding, and spectroscopy. Informal and engaging writing style; worked examples throughout the text; unanswered problems in every chapter; contains a generous use of informative, colorful illustrations.

The fourth edition of this comprehensive resource helps future and practicing teachers recognize and assess literacy problems, while providing practical, effective intervention strategies to help every student succeed. The author thoroughly explores the major components of literacy, providing an overview of pertinent research, suggested methods and tools for diagnosis and assessment, intervention strategies and activities, and technology applications to increase students' skills. Discussions throughout focus on the needs of English learners, offering appropriate instructional strategies and tailored teaching ideas to help both teachers and their students. Several valuable appendices include assessment tools, instructions and visuals for creating and implementing the book's more than 150 instructional strategies and activities, and other resources.

This book examines some theoretical and empirical aspects about complexities of inclusion, disability and culture. It challenges the globalized technical and reductionist approach of inclusion and argues that concepts of disability and inclusion are culturally constructed. Disability and inclusion are concepts which do not define a global agenda, in the sense that one size fits all. Rather they should be seen as being completely context dependent and that they should be deconstructed with respect to specific cultural contexts, with respects to society, ethics, religion and history. The main argument of the book is that many cultural backgrounds, including Egyptians, have their own long-standing beliefs and practices which do not define or address disability in the same way as western culture. Such cultural differences in understanding disability may lead to different understandings, conceptualizations and practices of inclusion. The book articulates disability and inclusion within a socio-ethical-religious discourse based on the Islamic underpinnings of equality and differences. This discourse enhances and supports the calls for considering inclusion and disability within a cultural model that takes into account the common values about disability in any given context which consequently will affect the way educational provision is provided in that context. Finally, the book challenges the “psychological” concept of “attitude” that has been represented in the literature simply as a matter of acceptance or rejection. Inclusion, Disability and Culture shows that “attitude” is a complex and context-dependent issue that can’t be understood in isolation from the wider context within which such responses were created. Specifically, the role of the social views about disability, religious values, school cultures, educational system and structural and organizational constraints can’t be underestimated in understanding teachers’ attitudes towards a complex issue like inclusion.
