Reflecting the latest practices in the field, *Clinical Decision Making: Case Studies in Medical-Surgical Nursing*, 2nd edition bridges the gap between classroom knowledge and clinical application. Emphasizing holistic nursing care, this resource helps nursing students sharpen their critical thinking skills and gain experience applying what they have learned. The more than 40 medical-surgical case histories and related questions, and responses are based on real-life client situations. Every case contains an introductory blueprint of variables that must be considered while evaluating a particular scenario concerning the client, nursing protocol, and setting of care. Each blueprint and case is different, just as each clinical situation is unique. As learners simulate the actual decision-making process, they gain valuable experience making informed clinical judgments that will help them become successful nurses. Categorized by complexity, the book appeals to a broad range of learning levels and styles. This question-and-answer companion to The Brigham Intensive Review of Internal Medicine, which is based upon the popular review course from Harvard Medical School, is a study guide for the American Board of Internal Medicine certification or maintenance of certification examination, as well as for general practice review by physicians and residents. Editors Ajay K. Singh and Joseph Loscalzo recruited leading authorities from Harvard as well as former chief residents at Brigham and Women's Hospital to contribute to this book. This thorough resource features 500 board review questions and answers on internal medicine specialties including: Infectious Disease, Hematology and Oncology, Rheumatology, Pulmonary and Critical Care Medicine, Endocrinology, Nephrology and Hypertension, Digestive Diseases and Disorders of the Pancreas and Liver, Cardiovascular Disease, Neurology, and General Internal Medicine. As the required content for the American Board of Internal Medicine continues to evolve, studying can prove challenging. The Brigham Intensive Review of Internal Medicine Question and Answer Companion is the ideal study guide for anyone preparing for certification or recertification. What captivates learners and interests them in studying social psychology? In Case Studies for Teaching Social Psychology, Tom Heinzen and Wind Goodfriend use brief, entertaining case stories to further enhance the historical context, evolution of, and challenges to major theories within the field. By employing a mix of unique, contemporary research and hallmark studies to illustrate classic concepts, Heinzen and Goodfriend steer students to explore new, meaningful ways of thinking about and connecting with foundational course concepts. In turn, this approach facilitates engaged conversation and deeper critical thinking both in and outside of the classroom.

Praised for its comprehensive coverage and clear organization, Critical Care Nursing: Diagnosis and Management, 7th Edition is the go-to critical care nursing text for both practicing nurses and nursing students preparing for clinicals. Nine sections highlight the alterations seen in critical care and make it easy to understand the unique challenges of critical care nursing. An abundance of learning tools such as Patient Safety Alerts, Evidence-Based Practice boxes, NIC interventions, case studies, Pharmacologic Management boxes, and more give you a better understanding of clinical practice and help you reference vital information quickly and easily. Consistent organization within each body-system unit allows you to use this book as a one-stop resource for your critical care nursing education, as well as a reference for the relevant assessment techniques, lab values, and patient management principles needed by practicing nurses. Evidence-Based Practice boxes reinforce practice guidelines for both collaborative and nursing care. Case studies in each chapter help you internalize and apply chapter content to clinical situations. Pharmacologic Management tables offer quick summaries of the drugs most often used in critical care. Patient Safety Alerts provide key information for special safety issues to keep safety in the forefront of your mind. Nursing Management Plans of Care appendix provides detailed, clinically-relevant care plans tied to 35 different NANDA nursing diagnoses. Highlighted QSEN content makes it easy to identify QSEN competencies as they relate to critical care nursing. Internet Resources box provides a list of key websites from leading organizations in critical care. Combined chapter on shock, sepsis and multiple

organ dysfunction syndrome makes understanding similar physiologic processes easier. Chapter summaries provide quick study guides by organizing key information in the chapter. New! 6-second, standard ECG strips help you learn to identify wave forms and accurately reflect what you'll use in practice. New equipment information and photos accurately depicts what you'll encounter in a modern critical care unit.

This research report presents a case study of the application of the proposed methodology to Sudan using data captured by the 2014-2015 National Household Budget and Poverty Survey (NHBS). The application of the methodology proposed in the toolkit requires the identification of individuals' characteristics to fit them into specific social groups, and the risks to which each of these categories is exposed. This survey enables the identification of different social groups according to the age, gender and place of residence of the respondents, as well as six risks: a child being out of school, food insecurity, unemployment, insufficient earnings, crop failure and livestock issues, and natural disaster. In conclusion, this study indicates a significant social protection coverage gap in Sudan. Government social protection programmes reach less than 3 per cent of women and men in rural and urban areas. Also government provision of formal social protection makes the smallest contribution to mitigating risks (0.4 per cent) as compared to other sources of protection. In other words, the benefits currently provided by the government are insufficient to address the risks that affect the population throughout the life cycle, hampering people's livelihoods and the country's development.

The thoroughly revised second edition of the Oxford Textbook of Critical Care is a comprehensive multi-disciplinary text covering all aspects of adult intensive care management. Uniquely the book takes a problem-orientated approach providing a reference source for clinical issues experienced every day in the intensive care unit. The text is organized into short topics allowing readers to rapidly access authoritative information on specific clinical problems. Each topic refers to basic physiological principles and provides up-to-date treatment advice supported by references to the most vital literature. Where international differences exist in clinical practice, authors cover alternative views. Key messages summarise each topic in order to aid quick review and decision making. Edited and written by an international group of recognized experts from many disciplines, the second edition of the Oxford Textbook of Critical Care provides an up-to-date reference that is relevant for intensive care units and emergency departments globally. This volume is the definitive text for all health care providers, including physicians, nurses, respiratory therapists, and other allied health professionals who take care of critically ill patients. This print edition of The Oxford Textbook of Critical Care comes with a year's access to the online version on Oxford Medicine Online. By activating your unique access code, you can read and annotate the full text online, follow links from the references to primary research materials, and view, enlarge and download all the figures and tables.

Paramedics must perform a systematic assessment of the patient, determine appropriate treatment, and give it. While assessment and management principles are learned in initial training, they are not practiced until training is completed. Now, paramedic students can apply these principles with Medical Case Studies for the Paramedic. Medical Case Studies for the Paramedic presents 20 case studies on the most important medical emergencies for the ALS-level reader. A superb supplement to classroom and textbook learning, this book allows the reader to practice applying knowledge to cases before actually going on an emergency call. The types of emergencies include a range of presentations such as semiconsciousness, unconsciousness, difficulty breathing, weakness, nausea, headache, slurred speech, chest pain, allergic reaction, seizure, and anxiety. Each case study is presented in full, poses questions to the reader, and is followed by a summary of the case, including answers to the questions posed. The objectives for each of the case studies in this book are as follows: Describe the appropriate initial management based on initial assessment findings. Interpret the patient's cardiac rhythm, and determine if a correlation exists between the patient's condition and their cardiac rhythm. Formulate a field impression based on the patient's signs and symptoms, and findings of the focused history and physical examination. Determine if the patient's vital sign values and SAMPLE history findings are consistent with your field impression. Identify specific treatment that is required for the patient's condition. Determine if further treatment is required following a post-treatment reassessment of the patient. Based on the patient's condition, identify any special considerations for care.

Advances in trauma care have accelerated over the past decade, spurred by the significant burden of injury from the wars in Afghanistan and Iraq. Between 2005 and 2013, the case fatality rate for United States service members injured in Afghanistan decreased by nearly 50 percent, despite an increase in the severity of injury among U.S. troops during the same period of time. But as the war in Afghanistan ends, knowledge and advances in trauma care developed by the Department of Defense (DoD) over the past decade from experiences in Afghanistan and Iraq may be lost. This would have implications for the quality of trauma care both within the DoD and in the civilian setting, where adoption of military advances in trauma care has become increasingly common and necessary to improve the response to multiple civilian casualty events. Intentional steps to codify and harvest the lessons learned within the military's trauma system are needed to ensure a ready military medical force for future combat and to prevent death from survivable injuries in both military and civilian systems. This will require partnership across military and civilian sectors and a sustained commitment from trauma system leaders at all levels to assure that the necessary knowledge and tools are not lost. A National Trauma Care System defines the components of a learning health system necessary to enable continued improvement in trauma care in both the civilian and the military sectors. This report provides recommendations to ensure that lessons learned over the past decade from the military's experiences in Afghanistan and Iraq are sustained and built upon for future combat operations and translated into the U.S. civilian system.

Now edited by a pulmonologist, the 3rd edition is still one of the most well-written texts for students learning to understand the assessment and treatment of patients with respiratory disease. Each chapter begins with a background of selected disorders, followed by a case study with questions and answers designed to stimulate critical thinking

skills.

THE DEFINITIVE GUIDE TO INPATIENT MEDICINE, UPDATED AND EXPANDED FOR A NEW GENERATION OF STUDENTS AND PRACTITIONERS A long-awaited update to the acclaimed Saint-Francis Guides, the Saint-Chopra Guide to Inpatient Medicine is the definitive practical manual for learning and practicing inpatient medicine. Its end-to-end coverage of the specialty focuses on both commonly encountered problems and best practices for navigating them, all in a portable and user-friendly format. Composed of lists, flowcharts, and "hot key" clinical insights based on the authors' decades of experience, the Saint-Chopra Guide ushers clinicians through common clinical scenarios from admission to differential diagnosis and clinical plan. It will be an invaluable addition -- and safety net -- to the repertoire of trainees, clinicians, and practicing hospitalists at any stage of their career.

Pharmacologic intervention is a cornerstone of paramedic treatment. Paramedic: Pharmacology Applications covers the relevant issues of pharmacology as they relate to the field practice of the paramedic. The text gives students a comprehensive understanding of the indications, contraindications, and side effects of medications, as well as insight into the pathophysiology and etiology of conditions requiring rapid pharmacologic intervention. In addition, progressive case studies are found in each chapter. The cases follow patients from dispatch through delivery to the emergency department and cover every aspect of assessment and treatment. Each case study includes eight critical thinking questions. Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition.

Medical Case Studies for the Paramedic contains 20 case studies representing a variety of medical emergencies that the paramedic may encounter in the field. Each case study begins by presenting dispatch information and a general impression of the patient upon arriving at the scene. Then, as the case progresses, pertinent patient information is provided, interspersed with a series of standardized questions designed to assess the paramedic's ability in correlating specific signs and symptoms with a particular medical condition and providing the appropriate treatment.

Children are not simply adults. They commonly present with unique problems that are typically not encountered in older patients. These unique problems require the paramedic to alter, to some degree, his or her approach to the sick or injured child. Because a relatively small percentage of EMS calls involve a critically ill or injured child, it is common for the paramedic to experience anxiety when such a call is received. Pediatric Case Studies for the Paramedic contains 20 case studies representing a variety of pediatric emergencies that paramedics may encounter in the field.

Basic Life Support Provider: Pediatric Education for Prehospital Professionals (BLS PEPP) is a comprehensive source of prehospital medical information for the emergency care of infants and children. BLS PEPP is designed to give First Responders and EMT-Basics the education, skills, and confidence they need to effectively treat pediatric patients. Developed by the American Academy of Pediatrics, BLS PEPP specifically teaches prehospital professionals how to better assess and manage ill or injured children. BLS PEPP combines complete medical content with dynamic features and an interactive course to better prepare prehospital professionals for the field.

Case Studies in Nurse Anesthesia provides succinct and relevant information that can be used by students and professionals in the operating room. Information is written in a question and answer format for easy understanding and the chapters are divided into surgical specialties, with a focus on the most frequently performed procedures. Each case describes the entire perioperative course and discusses the patient's history and physical, anesthetic concerns, surgical concerns, anesthetic management, differential diagnosis, and potential complications."

Critical care medicine is one of the fastest-growing areas of practice, and Critical Care Study Guide, 1st ed., was the first reference to combine both concise text and reviews with questions. The second edition expands and improves coverage, including comprehensive studies in airway management, cardioversion and defibrillation, medical ethics, and the use of blood products. The unique combination of text with questions and answers makes this a crucial reference for all practitioners and residents who see patients in the Intensive Care Unit, and those planning to sit for medical boards.
