Based on a research project funded by the Army Research Institute, Foreign Language Learning reports original empirical and theoretical research on foreign language acquisition and makes recommendations about applications to foreign language instruction. The ultimate goal of this project was to identify a set of psychological principles that can

provide the foundation for--or at least, argumentation for--a foreign language training course. This book reviews the various studies of which the project is comprised. It begins with an overview chapter outlining the scope of the project and summarizing some of the experiments that were conducted in the laboratory. In each of the following chapters, the contributors report on previously unpublished research on selected specific psycholinguistic training principles; vocabulary and concept acquisition; language comprehension; reading processes; and bilingualism. The final chapter--prepared by a prominent expert on second language training--provides an overview and evaluation of the contribution of the research described in earlier chapters to the goal of improving instructional methods in foreign language learning. Sandwiched between the introductory and final chapters are four major sections: * Vocabulary and Concept Acquisition, which discusses the effect of first-language phonological configuration on lexical acquisition in a second language, contextual inference effects in foreign language vocabulary acquisition and retention, mediated processes in foreign language vocabulary acquisition and retention, and the status of the count-mass distinction in a mental grammar; * Language Comprehension, which addresses voice communication between air traffic controllers and pilots who are nonnative speakers of English, cognitive strategies in discourse processing, and the effects of context and word order in Maasai sentence production and comprehension; * Reading Processes, which discusses the enhancement of text comprehension through highlighting, the effect of alphabet and fluency on unitization processes in reading, and reading proficiency of bilinguals in their first and second languages; and * Bilingualism, which addresses Stroop interference effects in bilinguals between similar and dissimilar languages, the individual differences in second language proficiency, and the hierarchical model of bilingual representation.

PETER BRYANT & TEREZINHA NUNES The time that it takes children to learn to read varies greatly between different orthographies, as the chapter by Sprenger-Charolles clearly shows, and so do the difficulties that they encounter in

learning about their own orthography. Nevertheless most people, who have the chance to learn to read, do in the end read well enough, even though a large number experience some significant difficulties on the way. Most of them eventually become reasonably efficient spellers too, even though they go on make spelling mistakes (at any rate if they are English speakers) for the rest of their lives. So, the majority of humans plainly does have intellectual resources that are needed for reading and writing, but it does not always find these resources easy to marshal. What are these resources? Do any of them have to be acquired? Do different orthographies make quite different demands on the intellect? Do people differ significantly from each other in the strength and accessibility of these resources? If they do, are these differences an important factor in determining children's success in learning to read and write? These are the main questions that the different chapters in this section on Basic Processes set out to answer.

How do second language (L2) learners go about learning English grammar? How do they make use of their knowledge of a second language when working with computer-assisted language learning (CALL) materials? What role do individual differences play in the way in which learners work together in language-learning activities? Why are some learners resistant to instruction? These are the questions that this book addresses. Written in a readable and engaging style, the book takes an undogmatic and refreshing look at second language acquisition (SLA) research and investigates what learners actually do when working with L2 learning materials. The chapters include: An up-to-date review of the history of SLA as a field of research. An in-depth overview of the role played by explicit knowledge of L2 grammar. A critical discussion of the role of grammar instruction. An outline of the impact of individual factors on the L2 acquisition process. Key insights into the potential of multimedia CALL for L2 learning. Written by a researcher with many years of English teaching experience at university and secondary school level, it addresses the concerns of teachers, CALL practitioners and SLA researchers alike, providing insights from the interface of SLA theory and hands-on L2 pedagogy.

Experimental Methods in Language Acquisition Research provides students and researchers interested in language acquisition with comprehensible and practical information on the most frequently used methods in language acquisition research. It includes contributions on first and child/adult second language learners, language-impaired children, and on the acquisition of both spoken and signed language. Part I discusses specific experimental methods, explaining the rationale behind each one, and providing an overview of potential participants, the procedure and data-analysis, as well

as advantages and disadvantages and dos and don'ts. Part II focuses on comparisons across groups, addressing the theoretical, applied and methodological issues involved in such comparative work. This book will not only be of use to advanced undergraduate and postgraduate students, but also to any scholars wishing to learn more about a particular research method. It is suitable as a textbook in postgraduate programs in the fields of linguistics, education and psychology.

This highly practical volume helps K–8 teachers implement effective reading interventions that support meaningful comprehension and engage students with interesting, age-appropriate texts. Andrew P. Johnson presents a range of strategies for addressing difficulties in the core areas of word identification, fluency, and comprehension. Packed with illustrative figures, the book provides guidance and tools for assessing reading problems, combining and adapting interventions for particular students, planning writing activities to enhance reading, aligning efforts within a response-to-intervention framework, and designing individualized education programs. Informed by current research, Johnson candidly targets "educational malpractice" and helps readers puzzle through the controversies surrounding dyslexia diagnoses and special education decision making.

How can teachers make sure that all students gain the reading skills they need to be successful in school and in life? In this book, Karen Tankersley describes the six foundational "threads" that students need to study in order to become effective readers: phonemic awareness, phonics and decoding, vocabulary, fluency, comprehension, and higher-order processing. For each area, the author explains how students acquire the reading skills they need and offers a series of skill-building strategies and activities that teachers can use in the classroom. Although reading is perhaps most intensely taught in the kindergarten and 1st-grade classrooms, Tankersley emphasizes that helping students become lifelong readers is a task for all teachers, including content-area teachers in middle and high schools. The Threads of Reading addresses key questions about literacy, such as * What makes a difference in reading achievement? * How much reading time is enough? * How can teachers use writing to build reading skills? * How can teachers help students make meaning from their reading? The strategies in this book address many situations, from individual instruction to small- or large-group instruction, from kindergarten to high school. Teachers will appreciate the multitude of activities provided, and administrators will learn to better evaluate the reading programs in place in their districts and schools. Grounded in both research and "teacher lore" from actual classrooms, this book is a solid guide to helping students become lifelong readers. Success with Languages is designed to help all students develop the skills they need to become an effective language learner and to make the most of language study. Written by experienced language teachers at the Open University, this book offers undergraduates and postgraduates crucial and practical advice on important areas such as: choosing a language and study programme setting personal goals for language learning and monitoring progress using ICT to support language learning. Each of the ten chapters features a number of exercises in order to help students assess the ways they learn and consider where improvements can be made, making the most of the media available and how to use resources effectively.

Gifted pupils who also have special needs often receive provision for the special need whilst the giftedness is overlooked. Children with such double exceptionality can become depressed, frustrated and misbehave, and may not fulfil their potential. Based on international research and practice, this practical text enables the reader to identify highly able pupils with special needs, such as ADHD, dyspraxia, dyslexia and Downs Syndrome, and then make provision for them within the mainstream school. The book offers three emerging themes: creating a positive, constructive and supportive learning environment; offering a cognitively challenging curriculum; and engaging the learners in partnership to understand and manage their learning support. Whilst aimed mainly at teachers and students at both primary and secondary levels, this book should also be of interest to educators, researchers and educational psychologists.
