Paul Zoll MD is an engaging account of the life and work of Dr. Paul M. Zoll, the physician and medical researcher behind the treatments and techniques we use today to save victims of heart attacks and to prevent premature deaths from other forms of heart failure. The book tells how one man's compassion, insight, intelligence and perseverance solved medical mysteries that had plagued people through the ages. The biography also shows the human dimensions of Dr. Zoll, including his childhood, education, military service, family relationships, recreational interests and social associations throughout his life, from 1911 to 1999. But the book's primary topic is Dr. Zoll's contributions to medicine, especially his breakthroughs in cardiac care and his development of closed-chest pacemakers and defibrillators, implantable pacemakers and heart monitors. The biography positions Zoll as a leading

pioneer in cardiac care, whose innovations and ideas changed the field. Through carefully documented historical analysis, the book shows how Dr. Zoll was the creator and the first physician to successfully employ devices that are the fore bearers of life-saving implements commonly used today. The author, Dr. Stafford I. Cohen, was a medical resident under Dr. Zoll and, later, a colleague at Beth Israel Hospital in Boston. His book is the first full-length biography of Dr. Zoll. It strives for historical accuracy and gives a fair and balanced assessment of Zoll's life and work. Paul Zoll MD firmly establish Paul M. Zoll as a first-in-the-world innovator whose treatments and inventions make him the father of modern electrocardiac therapy - a man to whom we owe a great deal today.

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.
